Montana Sex Offender Treatment Association (MSOTA)

Dr. James Cantor is a clinical psychologist and sexual behaviour scientist. For the past 20 years, he has been studying the nature and causes of sexual interests from relatively familiar ones—such as heterosexuality and homosexuality, transsexuality, and asexuality—to rare and exotic phenomena, including vorarephilia (sexual fantasies of being swallowed) and furies (people who have sex while dressed or cross-dressed as animals). The most widely discussed of his findings has been his research using neuroimaging and other techniques to isolate the causes of pedophilia and hebephilia (the sexual preferences for prepubescent and pubescent children). His team's results have been published in the highest impact journals of psychology, including *Psychological Bulletin*, *the Journal of Consulting and Clinical Psychology*, and the *Journal of Abnormal Psychology*. Dr. Cantor regularly appears in the media internationally to discuss how society can better apply science to prevent sexual abuse and provide more ethical and more effective treatment for people with atypical sexual interests.

Interviews with him have appeared on BBC, CNN, and CBC; in *The New York Times*, *De Morgen*, *Le Quotidien*, *de Volkskrant*; and on Dan Savage's *Savage Love*. Dr. Cantor is a Senior Scientist at the Centre for Addiction and Mental Health (CAMH) in Toronto, Associate Professor of Psychiatry on the University of Toronto Faculty of Medicine, and his is the past Editor of the *Sexual Abuse*, the top research journal in this field and the official journal for the Association for the Treatment of Sexual Abusers. For updates and downloads, visit his website www.jamescantor.org, and follow @JamesCantorPhD on Twitter!
